

# Learning Bash Scripting in Kali Linux

## Working with Arrays and Conditional Statements

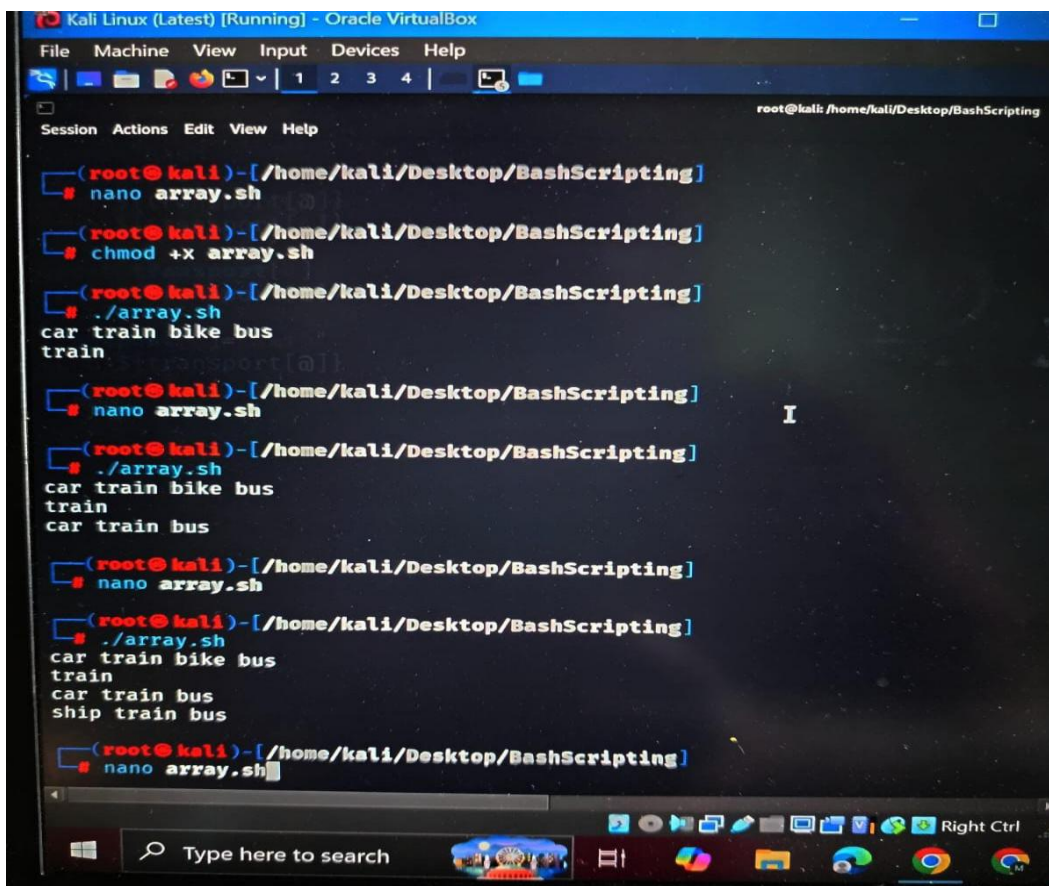

```
#!/bin/bash
transport=('car' 'train' 'bike' 'bus')
echo ${transport[@]}
echo ${transport[1]}

unset transport[2]
echo ${transport[@]}

transport[0]='ship'
echo ${transport[@]}
```

### Working with Arrays

- Created a Bash script to store multiple values in an array.
- Accessed array elements using index positions and displayed them with the echo command.
- Updated array values and verified the modified output by executing the script.

```
(root@kali)-[/home/kali/Desktop/BashScripting]
# nano array.sh

(root@kali)-[/home/kali/Desktop/BashScripting]
# chmod +x array.sh

(root@kali)-[/home/kali/Desktop/BashScripting]
# ./array.sh
car train bike bus
train

(root@kali)-[/home/kali/Desktop/BashScripting]
# nano array.sh

(root@kali)-[/home/kali/Desktop/BashScripting]
# ./array.sh
car train bike bus
train
car train bus

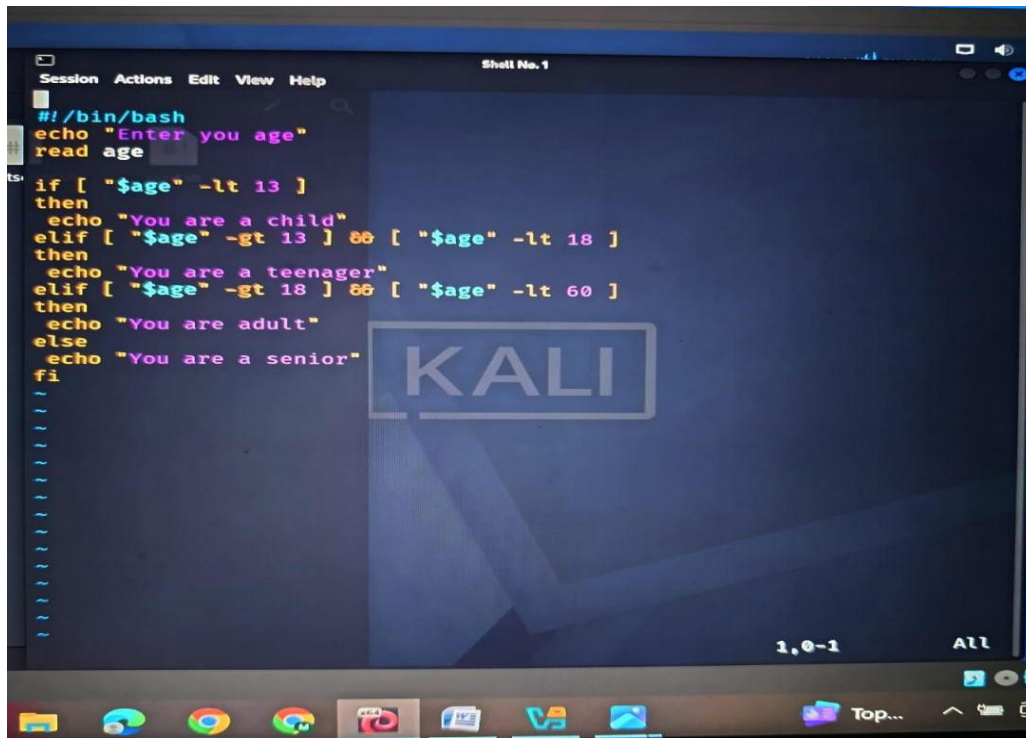

(root@kali)-[/home/kali/Desktop/BashScripting]
# nano array.sh

(root@kali)-[/home/kali/Desktop/BashScripting]
# ./array.sh
car train bike bus
train
car train bus
ship train bus

(root@kali)-[/home/kali/Desktop/BashScripting]
# nano array.sh
```

# Learning Bash Scripting in Kali Linux

## Working with Arrays and Conditional Statements

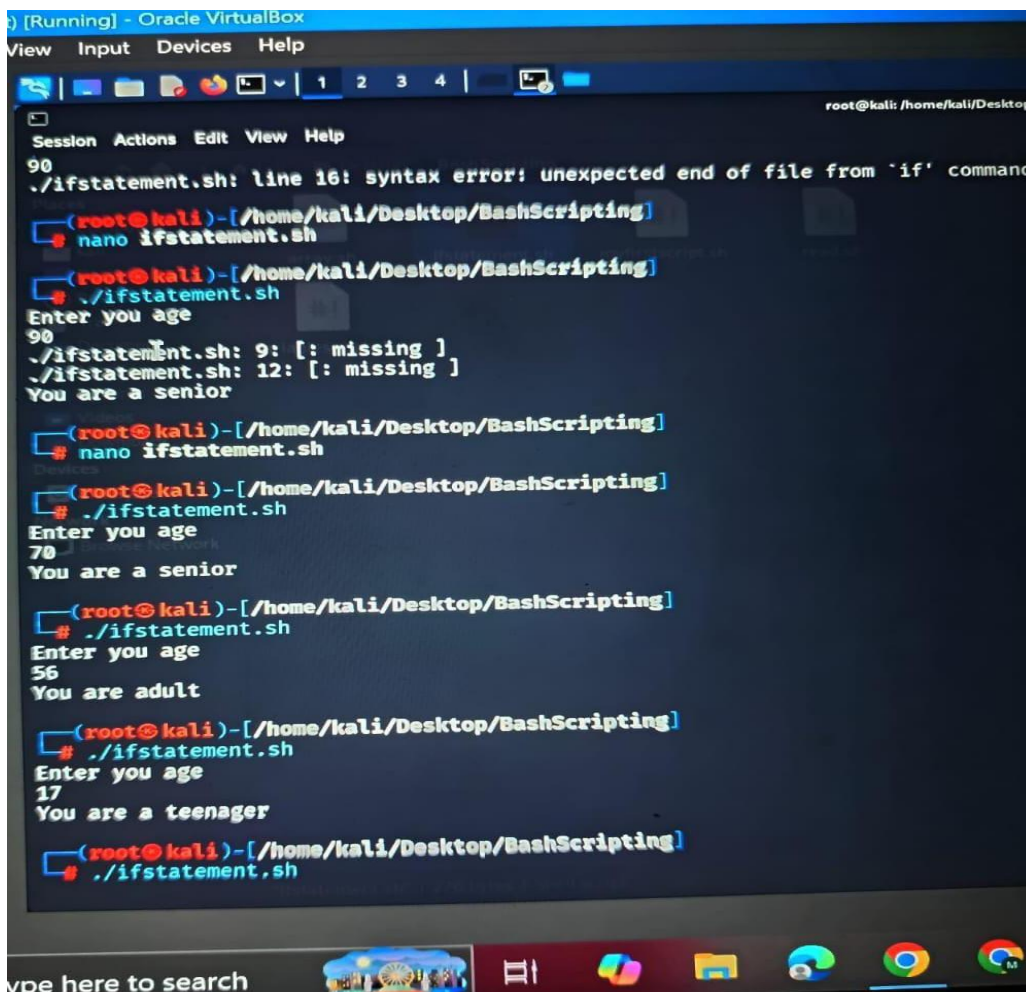

```
#!/bin/bash
echo "Enter you age"
read age

if [ "$age" -lt 13 ]
then
echo "You are a child"
elif [ "$age" -gt 13 ] && [ "$age" -lt 18 ]
then
echo "You are a teenager"
elif [ "$age" -gt 18 ] && [ "$age" -lt 60 ]
then
echo "You are adult"
else
echo "You are a senior"
fi
```

### Conditional Statements

- Created a Bash script using **if**, **elif**, and **else** statements.
- Accepted user input using the **read** command and evaluated multiple conditions.
- Tested the script with different age values to verify each decision branch.

```
90
./ifstatement.sh: line 16: syntax error: unexpected end of file from 'if' command

(root@kali)-[/home/kali/Desktop/BashScripting]
# nano ifstatement.sh

(root@kali)-[/home/kali/Desktop/BashScripting]
# ./ifstatement.sh
Enter you age
90
./ifstatement.sh: 9: [: missing ]
./ifstatement.sh: 12: [: missing ]
You are a senior

(root@kali)-[/home/kali/Desktop/BashScripting]
# nano ifstatement.sh

(root@kali)-[/home/kali/Desktop/BashScripting]
# ./ifstatement.sh
Enter you age
70
You are a senior

(root@kali)-[/home/kali/Desktop/BashScripting]
# ./ifstatement.sh
Enter you age
56
You are adult

(root@kali)-[/home/kali/Desktop/BashScripting]
# ./ifstatement.sh
Enter you age
17
You are a teenager

(root@kali)-[/home/kali/Desktop/BashScripting]
# ./ifstatement.sh
```
